

# Battery Eraser Hints & Tips

By Bob Ebdon

Our Battery Eraser offers precision in erasing graphite and coloured pencil, as tested by artist Bob Ebdon of the UKCPS.

When the eraser is switched on, the spinning action of the eraser lifts the pigment from the paper surface. This makes it ideal for correcting mistakes or re-working very small areas (1)

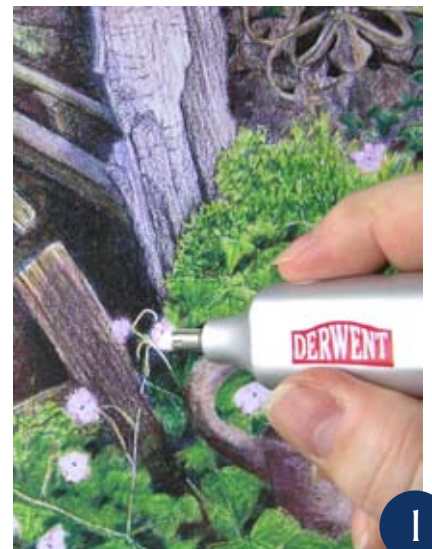

The precise control offered by the eraser makes it suitable for highlighting as shown opposite in the picture of the dog's eye (2). The eraser shape can be changed by working it on a spare piece of paper. A flat tip will give you a nice sharp edge which will erase a thin line, whereas a round or conical tip will allow you to erase a small dot.

This eraser is designed as a drawing tool, for refining marks and amending small areas of your work. For example, Bob has used the eraser to reproduce the engraved flower pattern on the surface of the bowl of cherries (3).

The erasers can be easily replaced and spare erasers are provided.

The product features an extra long eraser for extended use.

The eraser is operated by pushing down the button located on the top. The position of the button means it is perfect for left and right handed people and is very comfortable to use.
